

SYEDA MIDHATH JAVERIA

Artificial Intelligence & Machine Learning Undergraduate

+91 9071887276 | syedamidhath159@gmail.com | LinkedIn | GitHub | Credly

OBJECTIVE

Third-year B.E. student in Artificial Intelligence and Machine Learning, focused on computer vision and edge AI. Experienced in building an on-device human-detection system on Raspberry Pi and developing full-stack applications using Flask, React, and Flutter. Seeking software engineering or AI/ML internship opportunities.

EDUCATION

B.E. in Artificial Intelligence & Machine Learning	2024 – 2028
<i>Ballari Institute of Technology & Management</i> CGPA: 9.21/10 (through Semester 5)	
Pre-University Course - PUC (Class XII)	2023
<i>Ballari Independent PU College</i> Karnataka Board 91.33%	
SSLC (Class X)	2021
<i>Nandi High School</i> Karnataka Board 97.44%	

TECHNICAL SKILLS

Languages: Python, C, Java, JavaScript, Dart, PHP, Bash, SQL
AI/ML: YOLOv8, ONNX Runtime, OpenCV, XGBoost, NumPy
Backend & APIs: Flask, FastAPI, REST APIs, Socket.IO, GraphQL (Strawberry)
Frontend & Mobile: React.js, Flutter, HTML, CSS
Databases: PostgreSQL, MySQL, SQLite
Edge & Embedded: Raspberry Pi, ESP8266/NodeMCU, Edge Impulse
Tools: Git, GitHub, Linux/Ubuntu, Postman, Figma
Data Visualization: Power BI, Tableau

EXPERIENCE

AI/ML Intern – iHelp Robotics	Mar 2026 – Present
Remote	
- Contribute to the development of a MedTech feature for an assistive-technology product, as a core team member. - Own model evaluation and dataset preparation for the product's perception pipeline, analyzing model results to inform development.	
Software Engineering Intern – Infosys Springboard 7.0	Jun 2026 – Sept 2026
Python Track Virtual Internship	
- Built the Expert Decision Replay System, a FastAPI and PostgreSQL backend for capturing and replaying expert decision sequences in enterprise review. - Designed the schema and API layer, and delivered the project end to end against internship milestones.	

PROJECTS

Rakshak – Autonomous Drone Relief System	<i>Personal Project</i>
- Built an end-to-end disaster-response system: a drone detects people in disaster zones, survivors raise SOS alerts, and a command dashboard receives live video and geolocation. - Ran YOLOv8 human detection as an ONNX model directly on a Raspberry Pi from a USB camera, streaming MJPEG over a self-hosted hotspot network with services set to auto-start on boot. - Built a Flask + Socket.IO backend, a React + Leaflet.js map dashboard, and a Flutter SOS app; integrated a Pixhawk flight controller and validated the stack in real flight tests.	
<i>Python, YOLOv8, ONNX Runtime, Flask, Socket.IO, React, Leaflet.js, Flutter, Raspberry Pi, Pixhawk</i>	
Expert Decision Replay Platform (EDRP)	<i>Infosys Springboard Project</i>
- Developed the backend architecture for a decision-management platform using FastAPI, organizing application logic into router, service, repository, and model layers. - Designed a PostgreSQL schema covering users, teams, decisions, alternatives, approvals, comments, audit logs, and decision version history. - Implemented asynchronous database access using SQLAlchemy and asyncpg, with Alembic for migrations and Neon PostgreSQL as the database host. - Worked with JWT-based authentication and configured Backblaze B2 for attachment storage; prepared the backend for integration with a React + Vite frontend, with API documentation through Swagger UI.	
<i>Python, FastAPI, PostgreSQL, SQLAlchemy, Alembic, JWT, React, Vite</i>	
GitHub Repo	
TinyML Gesture Classifier on Microcontroller	<i>Personal Project</i>
Trained a MobileNetV2 transfer-learning image classifier in Edge Impulse and deployed it to microcontroller hardware for real-time rock-paper-scissors recognition.	
<i>Edge Impulse, MobileNetV2, embedded C</i>	

Additional projects: github.com/Ph0enix22

LEADERSHIP & EXTRACURRICULARS

R&D Member – Team Buraq, Drone Engineering & Edge AI

- Recruited to the R&D team, contributing to drone engineering and on-device AI development, testing, and evaluation.
- Delivered hands-on Edge Computing sessions with ESP8266/NodeMCU to two cohorts of approximately 150 and 70 students across departments and semesters at BITM and Kishkinda University.

Technical Club Member – Kriya Forum, Department of AI&ML, BITM

- Mentor peers and contribute to organizing and conducting technical workshops for students.

CERTIFICATIONS

- Google IT Automation with Python Professional Certificate – Credential
- Edge AI for Microcontrollers Specialization, Edge Impulse – Credential
- Version Control, Atlassian – Credential
- Google UX Design Professional Certificate – Credential

Full certification list: [LinkedIn](#)

ACHIEVEMENTS

- Shortlisted for the ISTE research paper finals among 70 teams.
- Achieved a Top 10 finish in Beyond the Blueprint 2025, organized by M. S. Ramaiah University of Applied Sciences.
- Secured 3rd place in the evaluation round of the institute-level department hackathon.
